

ABSTRACT OF THE DISCLOSURE

For an image to be displayed on a liquid crystal display,  
a thinning process is executed to reduce a number of pixels  
constructing the image. An original image of an information  
5 image is produced in accordance with a pixel number of a taken  
subject image. A low-pass-filter process is executed for  
the original image. After the low-pass-filter process, the  
processed original image is written in a data ROM as the  
information image. When a digital camera is operated, the  
10 information image is displayed on a screen of the liquid  
crystal display by using the data of the information image  
stored in the data ROM.
